Q1. Write a program that requests a person's age from the user. If the user types a number greater than 100 use **throw** and catch exception.

Use catch(…) to catch all types of exceptions (negative or char)

Q2. Modify the **Date class** you wrote before. The class should implement the following exception classes :

InvalidDay Throw when an invalid day (< 1 or > 31) is passed to the class.

InvalidMonth Throw when an invalid month (< 1 or > 12) is passed to the class.
